## Problem 1

Create data frame with 1.numeric 2. logic 3. character and 4. factor vectors

```
Homework1_df = tibble(  
  vec_numeric = runif(10, min =, max =5),  
  vec_logic = (vec_numeric>2),  
  vec_char = c("This", "is", "the", "first", "homework", "for", "the", "data", "Science", "class"),  
  vec_factor = factor(c("T", "F", "T", "T", "T", "F", "T", "T", "T", "T"))  
)
```
